Boundary-scan workstation

Test Measurement World Staff - August 01, 2004

The ScanWorks Interconnect Development Station bundles the PCI-100 boundary-scan controller hardware kit with ScanWorks V3.4 test and programming software to speed the deployment of JTAG tests. It provides the required features for developing high-coverage interconnect tests that verify the structural integrity of PC boards, subassemblies, and systems. The bundle also includes ScanWorks Assistant, a test development aid for new and occasional users. Base price: $6000 for limited-term licensing.
